

DAVID N. BELYN

Richmond Hill, GA • (717) 437-3885 • dbelyn@hotmail.com • Top Secret/SCI Clearance

PROFESSIONAL SUMMARY

Senior strategist and analyst with 23+ years translating complex, ambiguous environments into actionable intelligence and investment-quality insight. Expertise spanning technology assessment, information operations, market dynamics, and multi-domain strategic planning across 15+ countries. Currently pursuing dual master's degrees (Applied Analytics and Applied Economics, Boston College, 3.87 GPA) with graduate-level AI/ML coursework. Builds as well as evaluates: recently shipped and deployed an autonomous LLM-agent trading platform end-to-end, then published its out-of-sample findings, including the evidence that killed the original thesis. Brings a rare combination of hands-on agentic AI engineering, quantitative rigor, and credibility assessing technology at scale. Eager to apply this background to evaluating startups and supporting investment decisions at an early-stage firm.

CORE COMPETENCIES

Technology Sector Analysis • AI/ML Research & Applied Engineering • Agentic System Design • Competitive Intelligence • Market Research & Synthesis • Investment Memos & Diligence Frameworks • Quantitative & Statistical Analysis • Python, R, SQL, ML Pipelines • Executive Briefing • Startup Ecosystem & Defense Tech

EDUCATION

M.S. Applied Analytics & M.S. Applied Economics, Boston College | Expected Spring 2027

- Woods College of Advancing Studies. GPA 3.87. Coursework: machine learning, NLP, AI/ML, econometrics, statistical modeling, game theory, industrial organization, market dynamics.

B.S. Business Administration, Finance, Auburn University | May 2011

- Magna Cum Laude with Honors.

TECHNICAL & RESEARCH PROJECTS

POPPER — Autonomous AI Trading & Strategy Validation Platform | 2026

- Shipped a production autonomous trading system end-to-end: LLM decision agent (Anthropic tool-use loop), deterministic server-side risk controls, live broker API integration, streaming market data, and a real-time dashboard. Python, FastAPI, PostgreSQL, Docker, deployed on cloud infrastructure.
- Designed the validation methodology that governed it — pre-registered acceptance criteria, out-of-sample testing, confidence bounds — then followed the evidence to a negative result, retiring four strategy families including one that scored 77% in-sample and 15% out-of-sample.
- Built a lookahead-safe backtesting engine spanning 14+ years of daily data with transaction costs and financing modeled; validated the instrument itself with a positive control that recovered the equity risk premium at Sharpe 0.55.
- Practical command of agentic systems in production: tool schemas and structured outputs, guardrails that hold when the model errs, cost and latency tradeoffs, and the distance between an agent demo and deployed infrastructure.
- Published the methodology and findings; codebase and incident analysis public on GitHub.

MERIDIAN — Global Media Intelligence Dashboard | 2024–Present

- Built a full-stack Flask application using GDELT data to monitor global news trends and narrative patterns across 100+ countries, deployed on Render.
- Applied BERTopic, transformer-based sentiment analysis, and custom frame scoring to surface emerging narratives relevant to investment themes (AI, fintech, defense tech, logistics); methodology targeted for publication in *Parameters*.

WFH Equity & Labor Market Research — BC Analytics & Industry Symposium | 2025

- Primary analysis of IPUMS CPS microdata on remote work and employment equity, presented as a competitive poster; findings challenged prevailing assumptions, demonstrating the ability to interrogate market narratives with data.

Capital One Case Competition — International Expansion Analysis | 2024

- Built investment-style market-entry recommendations for Vietnam and Brazil, synthesizing macroeconomic data, competitive dynamics, and go-to-market constraints into executive-ready deliverables.

PROFESSIONAL EXPERIENCE

G39 Planner, Information Operations, 3rd Infantry Division | 2024–Present

- Lead strategic IO planning for a 20,000-person division, synthesizing intelligence on adversary messaging, information environment dynamics, and emerging technology threats.
- Develop investment-grade analytical products for general officer audiences, translating technical and operational complexity into clear decision-support frameworks.

Operations Advisor to Chief of General Staff, U.S. Military Training Mission, Saudi Arabia | 2023–2024

- Senior strategic advisor at the ministerial level for one of the largest U.S. defense partnerships, advising on modernization across a \$20B+ annual budget environment.
- Direct exposure to defense-tech procurement, autonomous systems evaluation, and the intersection of commercial technology with national security requirements.

Battalion Executive Officer, 2nd Bn, 47th Infantry Regiment | 2022–2023

- Second-in-command of a 600-person organization; managed budget execution, \$2.1M+ in equipment assets, and cross-functional staff operations.

Special Mission Unit Operational Planner, Special Operations Command Central | 2021–2022

- Deployed as forward planner; developed operational plans and provided real-time decision support to senior command in a high-ambiguity environment.

Chief of Plans (S3), 198th Infantry Brigade | 2018–2020

- Directed brigade-level strategic planning; produced campaign plans aligned to Joint Chiefs and USSOUTHCOM direction and delivered analytical products for senior leadership.

Chief of Reconnaissance / Training Developer, Maneuver Center of Excellence | 2012–2013

- Directed research, writing, and publication of six doctrine manuals; led a 30-person cross-functional team producing content consumed Army-wide — long-form technical publishing under institutional review.

TECHNICAL SKILLS

Languages & Frameworks: Python (Pandas, NumPy, Scikit-learn, FastAPI, Flask, ML/NLP pipelines), R, SQL, C++, React/JavaScript

AI/ML: Anthropic API (agentic tool use, function calling, structured outputs), transformer models (HuggingFace), BERTopic, BiLSTM, TF-IDF pipelines, LDA/NMF topic modeling, model provisioning

Systems & Data: PostgreSQL, SQLAlchemy, Docker, REST and WebSocket APIs, cloud deployment (DigitalOcean, Render), GDELTA, IPUMS CPS

Analytics: Econometric modeling, classification (Linear SVM, logistic regression), time-series backtesting, hypothesis testing, Tableau, ggplot2, matplotlib, Excel

HONORS & RECOGNITION

Bronze Star Medal • Meritorious Service Medal • Joint Service Commendation Medal • Army Commendation Medal (5x) • Combat Infantryman's Badge • Expert Infantryman's Badge • Edward R. Murrow Award for Continuing Coverage (2002), Broadcast Journalism
